Paper No:5
Serial Number:10/025097
Filing Date: December 19,2001

1. The drawings are objected to because the blank rectangular boxes and/or merely numbered boxes of figure 1 must be labeled. Conventional features disclosed in the description and claims, where their detailed illustration is not essential for a proper understanding of the invention, should be illustrated in the form of a graphical drawing symbol or a labeled representation (e.g., a labeled rectangular box). see 37 CFR 1.83(a). It is further pointed out that merely numbering the boxes is not considered an appropriate label. This allows identification of the drawing element without consulting the text of the specification. Correction is required.

2. The drawings are objected to under 37 CFR 1.83(a) because they fail to show the jacket at least partially enclosing the load bearing members as described in the specification. Any structural

detail that is essential for a proper understanding of the disclosed invention should be shown in the drawing. MPEP § 608.02(d). A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance. Element 26 is stated as only the load bearing assembly 26 some of which have a polymer jacket, page 3, lines 20-21.

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claim 20 is rejected under 35 U.S.C. 103(a) as being unpatentable over Komori (Japanese reference 02056397 A).

Komori teaches a hoisting and lowering operation of a crane 1 which is monitored for rope 2 wear. An image sensor 13a, and picture processing device 17 determines if the rope has worn over the length of the rope.

The substitution between a crane and elevator environment is considered an equivalent substitution.

5. Claims 21,22 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

6. Claims 1-19 are allowed.

Art Unit: 2837

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. De Angelis '359,'942,'742, Payne et al., Uejio, Olsen et al and tKunii et al are cited to illustrate similar rope wear detectors but do not illustrate the markings on the rope jacket which are detected to determine wear.

Any inquiry of a general nature or relating to the **status** of this application or **filed papers** should be directed to the Group receptionist whose telephone number is (703) 308-0956.
